

### Abstract of the Disclosure

A large bodywork part, in particular a hood or a front hood which is designed to be impact-absorbing for a head impact. The bodywork part includes a reinforcing internal section 1 and an external panel 19 which are interconnected by means of connection elements. In order to achieve optimal energy absorption at low production cost, the connection elements are configured as tongues 15, 16 which project from the internal section 1 and are arranged at a distance from one another.
